

ATA COMMITMENT TO QUALITY

Our test and calibration laboratory is committed to using professional practices and providing the highest quality measurements. Our success will be measured by our short-term and long-term results, and by the respect and trust ATA earns from its customers, employees, shareholders and the communities in which we operate.

To provide the highest quality results ATA has established a quality system, which governs the test and calibration activities performed both internal to the company and for customers. All persons concerned with measurement processes are required to be familiar with the quality system documents and implement the policies and procedures in their work. ATA management and staff are committed to technical excellence and the use of good technical judgment, free from any internal or external commercial or financial pressures.

ATA's executive management and laboratory management are both committed to excellence, which includes conformance with the ISO 17025, ISO 10012:2003, and ANSI Z540 measurement standards.
